Course description

Faculty
Prof. Miguel Hernan
Harvard T.H. Chan School of Public Health, Boston, USA

Prof. Marcel Zwahlen
Institute of Social and Preventive Medicine (ISPM), University of Bern, Switzerland

Place
CH – 3823 Wengen | SWITZERLAND
Hotel Jungfraublick (see map on http://www.epi-winterschool.org/hotels)

Introduction
Causal inference from observational data is a key task of epidemiology and of allied disciplines such as behavioural sciences and health services research. Commonly used statistical methods estimate association measures which cannot always be causally interpreted, even when all potential confounders are included in the analysis. In contrast, a causally explicit approach formally defines causal effects, identifies the conditions required to estimate causal effects without bias, and uses analytical methods that, under those conditions, provides estimates that can be endowed with a causal interpretation. This course presents such framework for causal inference from observational data and recent methodological developments, with a special emphasis on complex longitudinal data. The application of these methods will be illustrated using data from a synthetic HIV cohort study. The course is aimed at epidemiologists, statisticians, and other researchers who work with longitudinal observational data.

Course objectives
By the end of this short course participants will have
- An in-depth understanding of confounding and selection bias
- An understanding of the role and potential of different methodological approaches to overcome these problems, including inverse probability weighting, marginal structural models and nested structural models
- Practical data analysis experience using Stata® software.

What you have to bring
Students should bring their own portable computers. A course license for Stata® will be available, to be installed before arrival. University of Bern IT staff onsite can provide help.
**Outline of course**

The course will run over three days and consists of lectures in the morning and computer practicals during the evening. During the extended break in the afternoon, participants review course materials, catch up on emails or go skiing.

**Thursday, January 18th**
- Confounding and selection bias
- The bias of conventional methods
- Group work
- Review of day 1

**Friday, January 19th**
- Inverse probability weighting for marginal structural models
- IP weighting for survival analysis
- STATA practical: Marginal structural models
- Review of day 2

**Saturday, January 20th**
- Static versus dynamic treatment strategies
- IP weighting for dynamic strategies
- STATA practical: Dynamic strategies
- Review of day 3 and course evaluation

**Registration**
You can register on the Winter School website [www.epi-winterschool.org](http://www.epi-winterschool.org).

**Course hotels**
Participants must book their accommodations themselves (see map and recommendations on [www.epi-winterschool.org/hotels](http://www.epi-winterschool.org/hotels)).
